

DEFY LIMITS

Extreme Keyboards, Keypads & Keypanels

Programmed into any Windows environment with only three to four lines of code, T2 products enable end users and application developers to:

- Enhance speed and efficiency of CTI applications
- Program applications with unprecedented ease and efficiency
- Control active, inactive, hidden, and remote applications simultaneously
- Launch and switch applications
- Move multi-layered menus off monitors
- Establish fingertip control
- Eliminate mouse-driven input
- Increase operator speed and accuracy
- Improve ergonomics/reduce repetitive strain
- Reduce training requirements

T2 Software Specifications –

Display one or two lines of text on programmable LCD keys.

Display 36 x 24 pixel custom bitmap graphics on the LCD keys.

Eight LCD key color selections available.

Use any font and size available on your system plus other styles and effects.

Multiple application capable (T2 keys can be shared by more than one application at a time).

ActiveX Control for easy design and run time programming.

Unique hardware ID for software security.

Simple software methods to control LCD key attributes for text, graphics, color, etc.

Remote automation allows for web-aware network-wide keyboard control of applications.

T2 Hardware Specifications –

LCD Keys: 12 LC24.2 Trend keys

Resolution: 36 x 24 pixel

Interface: RS232

Power: 5 Volt @ 1200 m A (max); 500 mA (typical)

Operating life: 60,000 hours

Temperature: 0° - +40° C (operating)
-20° - +60° C (storage)

Humidity: 80% (relative)

Enhance CTI applications, and speed development of new solutions with T2 Programmable Keyboards, Keypads and Keypanels

The T2 family of keyboards, keypads and keypanels are easy-to-use, web-aware, object-linked components engineered to accelerate the development, launch and efficiency of new CTI applications. *Our featured keypanel model is designed to fit directly behind existing keyboards, conveniently protecting your investment in existing equipment.*

Utilizing ActiveX Control, **T2** products are integrated in minutes into any Windows® 32-bit Visual Basic® or Visual C++™ application running under Windows 95 or NT® operating systems.

In operation, T2 enables users to control applications by clearing monitors of awkward menus and assign multiple layers of threaded functions to programmable LCD keys. The immediate benefit: repetitive, mouse-driven multi-tasking becomes a quick 'n easy key function.
