

PRESS RELEASE

TTS Corporate Increases User Security through Latest Feature

TTS.com, a leading provider of technological solutions for the travel industry, is pleased to announce significant advancements in its corporate solution, TTS Corporate. In this announcement, we highlight an innovative future for TTS Corporate, as well as some lesser-known features that will help TTS Corporate users manage their corporate segment more efficiently.

Multi-Factor Authentication: Added Protection for TTS Corporate Accounts

Digital security has never been more crucial than it is today. We all know the devastating impact of security breaches, from identity theft to unauthorized access to personal information. That's why TTS has worked tirelessly to improve the security protocols that protect TTS Corporate accounts and data.

The new feature, Multi-factor Authentication (MFA), strengthens TTS Corporate's current security measures with an extra layer of protection.

"TTS has always prioritized user's needs, and security is more important than ever in today's digital landscape. The implementation of Multi-Factor Authentication is a significant step forward in our commitment to protecting our clients' data. MFA offers an essential layer of security for a more secure future for TTS Corporate users." – Rui Figueiredo, CEO at TTS.

To enable TTS Corporate's MFA, travel agencies' administrators, and companies' administrators can simply configure the feature within their TTS Corporate settings. Once activated, users will receive a verification code via email upon attempting to log in to TTS Corporate. This code serves as an additional layer of authentication, ensuring that even if someone has access to their password, they will not be able to access the data.

Get to Know TTS Corporate

[TTS Corporate](#) is a corporate solution developed by TTS, which allows travel agents to manage their corporate customers rigorously and simply. It is a highly efficient solution that can handle large volumes of data in a matter of seconds. With the ability to quickly import thousands of users, TTS offers an agile and scalable experience,

catering to small and large businesses. This flexibility enables easy implementation of TTS Corporate in companies of any size, allowing them to have a fully functional product in just a few days.

In addition, in May, TTS Corporate was migrated to AWS (Amazon Web Services). This change represents an important milestone in improving the TTS Corporate infrastructure, providing greater scalability, performance, and security. With AWS, "we are committed to offering an even more reliable and agile experience to our customers, ensuring that they can take full advantage of all the features and resources of TTS Corporate", highlights the company.
